### Credit Utilization Practice Problems

**Credit utilization:** The ratio of your total credit card limit and the amount of credit that is actually used. The ideal rate = 30% or lower

**Example:** Credit card limit = \$800. Current charges = \$200

Charges/credit limit = credit utilization rate

$\$200/\$800 = 25\%$

**Directions:** Compute the credit utilization for Cards 1-4 in the table below.

Card	A Current Charges	B Credit Limit	=	Credit Utilization Rate Column A / Column B	Ideal Maximum Charge (30% of credit limit)
1	\$800	\$1,500			\$450
2	\$60	\$2,500			\$750
3	\$150	\$3,000			\$900
4	\$200	\$1,000			\$300

You can use the chart below to calculate the credit utilization rate for your cards.

## Debt-to-Income Ratio Practice Problem

**Debt-to-income ratio** compares your monthly debt payments to your monthly gross pay. To calculate, divide the total of your monthly debt payments by your monthly gross pay.

Monthly debt payments/monthly gross pay = debt-to-income ratio

**Example:**

\$1,200 + \$200 monthly debt payments/\$6,000 gross pay  
 $\$1,400/\$6,000 = 23\%$

**Directions:** Use the facts below to calculate the debt-to-income ratio.

**The Facts:**

**Recurring Monthly Payments**

\$100	Credit Card
\$900	Rent
\$500	Car payment
\$5,000	Gross Monthly Pay

**Step 1:** Total monthly payments. \_\_\_\_\_

**Step 2:** Determine the monthly gross pay. This is the pay before any taxes or deductions are subtracted by the employer. \_\_\_\_\_

**Step 3:** Divide the total monthly payments (Step 1) by the monthly gross pay (Step 2).
